

Stamina

to stand up to the new standards in stainless.

The world of stainless is changing and YG-1 is meeting the challenge head-on with four new turning grades and geometries. Machining today's tougher and stronger materials demands increased durability without sacrificing productivity. And YG-1 delivers on both counts. For extreme difficult-to-machine materials at higher feed and speed rates, YG-1's new grades can handle whatever stainless dishes out—all at a competitive price to boost your productivity and reduce your production cost.

YG3030

ISO M20
Stainless steel
at continuous
high speed

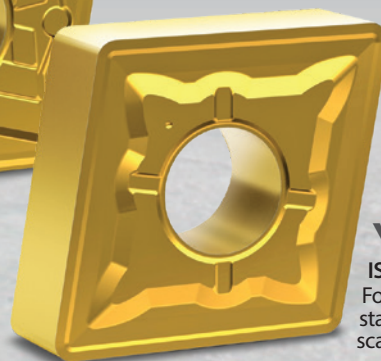

YG211

ISO M15
Stainless steel
finishing

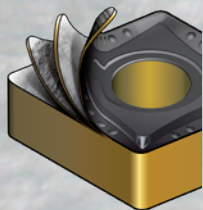

YG213

ISO M25
First choice for
stainless steel

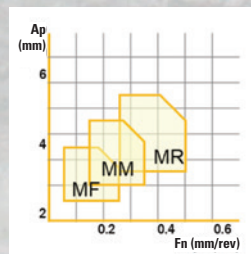

YG214

ISO M35, S25
For heavy interrupted
stainless steel and
scale cuts in HRSA

Coated Toughness

When you need extreme speed machining stainless, the unique CVD-coated YG3030 meets your needs with maximum toughness for heavy materials, longer tool life and increased productivity.

Stainless Chipbreakers

New turning grades provide unparalleled performance in today's demanding stainless applications.
